DECODING THE 2026 TAMIL NADU ASSEMBLY ELECTION

A FACT-BASED BROADCAST
ANALYSIS

Two Out of Every Three Constituencies Changed Hands

Understanding the Scale, Geography, and
Direction of Tamil Nadu's 2026 Electoral
Realignment.

Vandana Satwani
Data Analyst

The Election at a Glance

163

SEATS CHANGED HANDS

Out of 234 total constituencies — that is 69.7% of Tamil Nadu.

Nearly 7 in every 10 constituencies elected a different winner than in 2021.

163 Seats Changed Hands. Someone Had to Lose Them.

Every flipped seat was a seat someone held in 2021 — and lost in 2026.

Other parties also lost seats:

INC	PMK	BJP	VCK	CPI(M)
Lost 18	Lost 5	Lost 4	Lost 4	Lost 2

KEY TAKEAWAY
No incumbent
was truly safe
in 2026.

Where Did the Change Happen?

Regional Stability vs Political Change

flip_status ● Flipped ● No Flip

Insights

- South Tamil Nadu emerged as the epicenter of electoral change with 38 flipped constituencies.
- Chennai Metro witnessed the highest political volatility, retaining only 2 constituencies.
- Delta remained comparatively more stable than several other regions.

Key Takeaway

The political shockwave was not uniform across Tamil Nadu.

TVK's Rise: Where Did 108 Seats Come From?

TVK did not emerge from one place. It drew seats from every established party.

The Biggest Destination of Change: TVK

Who Benefited From The Chaos?

Party Migration Across Elections (2021 → 2026)

Key Finding

TVK emerged as the primary beneficiary of Tamil Nadu's constituency realignment.

Insights

TVK attracted seats from DMK, AIADMK, INC and several smaller parties.

DMK retained influence but lost significant ground to emerging competitors.

Traditional party loyalties weakened across multiple regions.

Key Takeaway

The 2026 election was not merely a transfer between DMK and AIADMK. A large share of constituencies realigned toward TVK, reshaping the state's political landscape.

The Fortresses That Refused To Fall

Even the most stable parties lost far more than they kept.

Party	2021 Seats	Retained	Lost	Verdict
DMK	173	40	133	Lost 77%
AIADMK	88	22	66	Lost 75%
INC	22	4	18	Lost 82%
CPI	2	2	0	Held all
PMK	6	1	5	Lost 83%
VCK	5	1	4	Lost 80%

Hidden Story

Elections are remembered for dramatic change. This election was equally defined by the constituencies that refused to change — and the parties that held them.

Chennai Metro Held. The South and Kongu Broke.

Chennai Metro

94%

flip rate (30 of 32)

Highest flip rate in the state — 30 of 32 seats changed

South

66%

flip rate (38 of 58)

Largest volume of flips — 38 seats

Kongu

82%

flip rate (27 of 33)

82% flip rate — second only to Chennai Metro

North

73%

flip rate (27 of 37)

Consistent churn across 37 constituencies

Central

63%

flip rate (26 of 41)

Above half — no region was fully stable

Delta

45%

flip rate (15 of 33)

Most stable region — but still 15 seats changed

Three Stories. One Show. This Is How to Tell It.

01

Open with the Number That Changed Tamil Nadu: 163

Lead with a single full-screen number. No charts. No context. Just 163. Let the anchor say: nearly 7 in 10 seats in Tamil Nadu changed hands. Pause. Then explain.

02

Show Where the Political Earthquake Hit Hardest

Chennai Metro at 94% vs Delta at 45% — put them side by side on screen. The gap is instantly gripping for any viewer, regardless of political knowledge.

03

Reveal Where Political Power Actually Moved

The party migration diagram is your final frame. It shows not just that change happened — but where political weight moved. End there. It needs no narration.

Honest About Limitations

2026 Turnout Not Yet Finalise

ECI Form-20 (audited final data) had not been released at analysis time. Turnout figures are from the live results portal and may differ slightly from final audited records

Regional Grouping is Editorial

The six-region split (Chennai Metro, North, Central, Kongu, Delta, South) is a challenge convention — not an official ECI or Government of India classification.

This Analysis Describes, Not Explains

The data shows which seats flipped and who gained. It cannot and does not explain why voters made the choices they did. No causal claims are made.

No Demographic Data Used

No voter demographic data was used or inferred. All findings rely solely on candidate-level ECI vote count records from publicly available ECI sources.
